Dear University of Arkansas System Member,

MedImpact Healthcare Systems, Inc., (MedImpact) on behalf of the University of Arkansas System Health Plan, will be implementing a change to the prescription drug formulary that affects you. **Please continue to read this entire letter.**

Effective August 1, 2019, Delzicol, a medication typically used to treat and prevent ulcerative colitis flare-ups, will be removed from the prescription drug formulary. **You are receiving this letter because our records indicate you had a prescription filled for Delzicol within the last 120 days.** This change is being made because formulary updates support the most cost efficient operation of the plan for all participants.

Before August 1, 2019, The Plan will continue to cover Delzicol. Please use this time between now and **August 1, 2019** to discuss alternative prescription medications with your doctor. You may be able to switch to one of the comparable medications used to treat your condition – including Mesalamine, Pentasa, and Apriso which will replace Delzicol as covered formulary medications starting **August 1, 2019**.

If your doctor determines that none of the covered medications are right for you due to your medical condition, an appeal process for coverage of a medication not on the formulary is available. To request coverage, your doctor must submit the appeal form and required medical documentation to MedImpact by fax to 1-858-790-7100.

Pharmacy benefits are subject to terms, conditions and eligibility as outlined in the benefit documentation in effect at the time services are provided. The above change to your prescription drug plan is directed by the University's Pharmacy Advisory Committee.

For questions, please contact MedImpact Healthcare Systems, Inc. at 1-800-788-2949.

Sincerely,

MedImpact and the University of Arkansas Pharmacy Advisory Committee

The University of Arkansas System's' prescription drug formulary, administered by MedImpact, is maintained by the University of Arkansas System's Pharmacy Advisory Committee. The Pharmacy Advisory Committee is composed of both faculty and clinical pharmacists, who advise the Committee on the most recent medical research results. The recommendations by the committee are based on the latest available evidence-based studies.
