Dear University of Arkansas System Member,

MedImpact Healthcare Systems, Inc., (MedImpact) on behalf of the University of Arkansas System Health Plan, will be implementing a change to the prescription benefit plan that affects you. **Please continue to read this entire letter.**

Effective August 1, 2021, concurrent usage of Victoza and Jardiance will no longer be covered under the prescription benefit plan. **You are receiving this letter because our records indicate you have filled both medications within the last 120 days.** This change is being made based upon the lack of documented clinical data supporting the use of Victoza and Jardiance in combination.

The Plan will continue to cover your prescription for both **Jardiance and Victoza** until December 31, 2021. After **December 31, 2021**, only one of these medications will be covered under your pharmacy benefit (pending any necessary prior authorization approvals needed). Please use this time between now and **December 31, 2021**, to discuss alternative medications with your doctor to replace either Victoza or Jardiance with another treatment available.

If your doctor believes this combination therapy is the best course of action for your unique medical condition, an appeal process is available. To request coverage your doctor must submit the appeal form and required medical documentation to EBRx by fax to 1-877-540-9036.

Pharmacy benefits are subject to terms, conditions and eligibility as outlined in the benefit documentation in effect at the time services are provided. The above change to your prescription benefit plan is directed by the University's Pharmacy Advisory Committee.

For questions, please contact MedImpact Healthcare Systems, Inc. at 1-800-788-2949.

Sincerely,

MedImpact and the University of Arkansas Pharmacy Advisory Committee

The University of Arkansas System's' prescription drug formulary, administered by MedImpact, is maintained by the University of Arkansas System's Pharmacy Advisory Committee. The Pharmacy Advisory Committee is composed of both faculty and clinical pharmacists, who advise the Committee on the most recent medical research results. The recommendations by the committee are based on the latest available evidence-based studies.
