

January 1, 2024

Dear University of Arkansas System Member,

MedImpact Healthcare Systems, Inc., (MedImpact) upon request of the University of Arkansas System Health Plan, has implemented a change to the prescription benefit plan that may affect you. **Please continue to read this entire letter.**

Effective January 1, 2024, Brands Humalog, Humalog Kwikpen U-100, Humalog Junior Kwikpen, Humalog Mix 75-25 Kwikpen, Advair Diskus, and Flovent HFA are excluded and the equivalent generic alternative will be covered under the prescription benefit plan. Because of the interchangeability of these drugs, alternative medications may be substituted directly at the pharmacy without disruption. The pharmacy will receive a message when they process your prescription stating that the brand cannot be filled due to the availability of a generic. If available, the pharmacy will then submit for the generic.

Generic Alternative	Brand Name
Insulin Lispro	Humalog
Insulin Lispro	Humalog Kwikpen U-100
Insulin Lispro	Humalog Junior Kwikpen
Insulin Lispro Protamin/Lispro	Humalog Mix 75-25 Kwikpen
Fluticasone Propion/Salmeterol	Advair Diskus
Fluticasone Propionate	Flovent HFA

If your doctor determines that the formulary alternative covered medications are not right for you due to your medical condition, an appeal process for coverage of a medication not on the formulary is available. To request coverage, your doctor must submit the appeal form and required medical documentation to EBRx by fax to 1-877-540-9036.

Pharmacy benefits are subject to terms, conditions and eligibility as outlined in the benefit documentation in effect at the time services are provided. The above change to your prescription benefit plan is directed by the University's Pharmacy Advisory Committee. For questions, please contact MedImpact Healthcare Systems, Inc. at 1-800-788-2949.

Sincerely,

MedImpact and the University of Arkansas Pharmacy Advisory Committee

The University of Arkansas System's' prescription drug formulary, administered by MedImpact, is maintained by the University of Arkansas System's Pharmacy Advisory Committee. The Pharmacy Advisory Committee is composed of both faculty and clinical pharmacists, who advise the Committee on the most recent medical research results. The recommendations by the committee are based on the latest available evidence-based studies.
